

Thrust Ball Bearings

Thrust ball bearings are separable bearings. including a shaft washer (to match with the shaft), a seat washer (to match with the bearing housing), and a piece of balls & cage assembly.

There are two types of thrust ball bearings: Single-direction thrust ball bearing and bio-direction thrust ball bearing.

Single-direction thrust ball bearing can only bear axial load from one direction, and can be used for axial positioning in single direction.

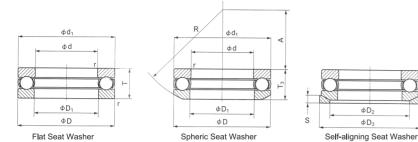

Bio-direction thrust ball bearing can bear axial loads from two directions, and can be used for axial positioning in two directions.

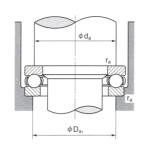

Thrust ball bearings are generally available with pressed steel cage. Machined steel cage or brass cage are also possible.
